

Four Post Lift

4 heavy duty, high quality, stainless steel lifting cables and a single hydraulic cylinder mounted underneath the runway makes the lift the most durable, maintenance free lifting system on the market.

Dual hub cable sheaves reduce stress and fatigue on the axles, sheaves and cables. We insist on using dual-hub cables sheaves, even if they cost us more to make. When you buy TM, we throw in peace of mind as a gift.

The TM is equipped with multi adjustable height locking position for variable-height parking. A convenient push-button pneumatic safety lock control releases all four independent safety lock simultaneously.

Each lift is supplied with four high-quality stainless steel lifting cables, rated at 14,400 lbs each. The combined rating of these cables is more than 822% of the maximum lifting capacity of the entire lift!

We incorporate maintenance free hydraulic power system into each lift for ultimate dependability, and all controls are conveniently located within close reach.
